

During STEM Week this year, Year 3/4 have been exploring “Wonderful Water”.

They have been busy writing explanation texts about the processes that occur during the 4 stages of the Water Cycle. In addition to this, they have carried out investigations in order to observe evaporation and condensation taking place. We hope you enjoy looking at photographs of their Water Cycle bags.

Towards the end of the week, Year 3/4 innovated their own designs relating to water. We saw some fantastic design ideas across the phase including a hands-free umbrella, terrific tech-toilet and luxury pool float!
