

Help at home for Level 15

In order to pass Level 15 you need to be able to takeaway 10 from any two digit number.

E.G.

$$43-10=33$$

$$32-10=22$$

$$51-10=41$$

$$68-10=58$$

Remember when taking away the largest number come first.

This is similar to adding 10 as the units stay the same. The ten column just becomes smaller Ask:

- **“What do you notice about the tens column?”**
- **“What do you notice about the units column?”**

For 63-10, encourage the children to say 6 tens take away 1 ten is 5 tens , which is 50, so the answer is 53. (units don't change)
