

LO: I can explore the changes in autumn

What we are going to learn:

Continue to understand the golden rules and how we can develop resilience

Spot changes to our environment on a senses walk

Identify animal prints and search for animals around the school grounds

Create a nature crown by selecting natural materials, colours and textures

Learn the song 'Autumn Leaves are Falling Down' and perform in groups

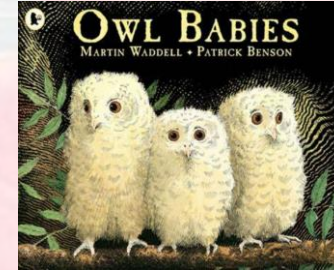

Literacy: innovate a text map sentence and write a label using Fred Fingers

Maths: explore numbers 2 and 3 and shapes – circles and triangles

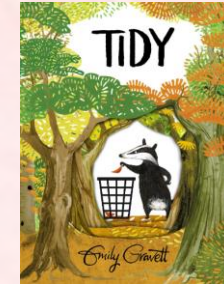

Key person:

Key reading:

Owl Babies

Tidy

Key vocabulary:

Hibernate
Migrate
Temperature
Season
Environment
Planet Earth

Key knowledge:

Autumn is one of the four seasons: Summer Autumn, Winter, Spring. Autumn occurs in September, October, November. In Autumn, the environment changes around us. This can be the weather, temperature and animal behaviour. Leaves change colour from green to brown, red, yellow or orange because they are getting less sunlight. The temperature gets colder because our planet, Earth, is moving further away from the sun that keeps us warm. Some animals gather food to store for the Autumn as there is less food around. Some animals, such as foxes, grow a thick coat to keep them warm. Some animals hibernate during the Autumn and Winter. They sleep until it becomes warmer in Spring time. Some animals migrate- they move away to a warmer country and return later in the year.
